GENERAL MATH REVIEW

- Many studies have shown that, during the summer, students lose a substantial portion of their math skills acquired over the course of a school year. This puts them at a disadvantage upon returning for a new school year, as the expectations of a new course presuppose the skills and knowledge taught in the previous course.
- The Seton math department, in cooperation with the administration, has begun a program similar to the summer reading program for English. Our hope is that this program will help students transition out of the summer recess and into their new math courses smoothly and with less stress.
- We recommend that the sessions be worked gradually over several weeks, perhaps one session done in a day, and two or three days a week. There are ten sessions, each one of which should take about a half hour, though the times will undoubtedly vary among students.
- As with summer reading, the work is expected to be done before the new school year starts. You are responsible for keeping your papers and having them ready to turn in the first day or whenever your teacher asks for them. The summer work will count for approximately 5% of your first quarter grade in the next math course. (For this review, that would usually be Pre-Algebra.)
- IMPORTANT: Do all your work on separate paper. It is essential that you show all your work, and that it is organized and legible. Put your name clearly on each page of work. If these conditions are not met, you will not get full credit for your work. Also, I strongly suggest that you scan of copy your papers, so that if you lose your originals, you will have a backup.
